

Dear Vince,

Apologies for the delay in responding to you over this.

At the UKCG H&S Sub-group meeting in May the following comments were noted:

***“Utility companies entering UKCG sites:***

*Document produced by HBF/CECA (previously circulated) was noted as agreed with HSE, however members expressed concern that there was no reference to site specific RA and MS. It was also noted that it does not include some major utility providers such as EDF. It was considered that the document requires review and improvement prior to endorsement by UKCG.”*

I note that the document is due for review 16<sup>th</sup> November 2012.

We are also aware of the Energy Networks Association “Utilities Avoidance Charter”, and are interested in the relationship, if any, between the two.

We meet again on 20<sup>th</sup> September, and would like to be able to provide an update then, also to speak to you regarding the use and developments of this document.

I have copied John Wilson (CECA) into this for completeness

Regards,

David.
